PALMS PROGRAMME FOR THE MONTH

invites you for a 2-hour programme on

emotional mastery

by

Mr. V. Jayakumar

12th

Date :
September 2024 (Thu)

Time:
6.30pm to 9.00pm

Venue: PALMS Meeting Hall, 84- D, South Raja Street,
Indian Chamber Building, Tuticorin – 628 001 .

Programme Objective: The objective of this programme is to equip participants with the fundamental skills needed to enhance their emotional intelligence, thereby improving their personal and professional relationships. At the end of the programme, the participants, will be able to:

- **Develop Self-Awareness:** Learn to identify and understand their own emotions and the impact these emotions have on their thoughts, behaviours, and interactions with others.
- **Enhance Self-Regulation:** Acquire strategies to manage and control their emotions, particularly in high-stress situations, to respond thoughtfully rather than react impulsively.
- **Improve Empathy:** Strengthen their ability to understand and relate to the emotions of others, which is crucial for effective communication and relationship-building.
- **Boost Social Skills:** Practice techniques for improving interpersonal communication, fostering teamwork, and creating positive, productive relationships.

Through interactive exercises and discussions, this training session will provide participants with practical tools to apply EI principles in their daily lives. By the end, they will be better equipped to navigate emotional challenges, leading to improved decision-making and stronger, more resilient relationships.

Resource Person: Mr. Jayakumar is a dedicated life coach and consultant with over a decade of experience in training and development. With a B.E. in Electronics and Instrumentation, he is a certified Zone Trainer in JCI, an NLP Practitioner, and an expert in aptitude training and soft skills development. His skill set includes personality development, placement training, and storytelling, all delivered through an engaging, activity-based approach.

He has a proven track record of impactful training across schools, colleges, and corporate environments. He has conducted youth empowerment programs in rural government schools, emphasizing essential life skills and confidence-building. His effective public speaking courses and co-faculty roles in Speech Craft & Teach Craft programs are well-known. He has benefited numerous organizations, including Rajmahal Silks, Idhayam Oil Mill, and Vishaal Promotors, and was awarded Outstanding Trainer of Zone XVIII in 2022. He collaborates with government and NGO institutions, such as Anna Institute of Management and ROTARY. His skills as a motivational speaker, production consultant, and PowerPoint expert are widely recognized, and helped him make a mark in the training industry.

Programme Fee: Rs.750/- for Associate Members
Rs.1200/- for Non-Members.

Programme Schedule :

6.30pm to 6.45pm - Hi Tea
6.45pm to 8.45pm - Programme
8.45pm to 9.00pm - Dinner

INSIDE OUT

Think WIN - WIN

Those of you who have read Stephen Covey's famous book "The 7 Habits of Highly Effective People" would have come across the term Think WIN - WIN, which he propagates as the 4th Habit.

He mentions that there are 4 possible states we can arrive at while interacting with someone, which are: I WIN – YOU LOSE; I LOSE – YOU WIN; I LOSE – YOU LOSE; I WIN - YOU WIN.

While a few may be skeptical about whether it is even possible to arrive at that ideal state of WIN - WIN, I have had experiences, where this was very much possible. I would like to share 2 such incidents in my life, where I was able to achieve this.

The first one was way back in 1998, when I was in the business of manufacturing and marketing, Asafoetida in my hometown, Tuticorin. I had a tough competition from another company in Rajapalayam, who was making the same product and selling it in Tuticorin market. In terms of quality, both our products were equally good, but when it came to price, my competitor was able to sell it cheaper. Thereby, he was making it difficult for me, to penetrate the market. After struggling with this situation, for a few months, one fine day, an idea came to my mind - "Instead of competing with that brand, why don't I befriend that owner and look at ways for collaboration." So, I invited him to my office and just started a casual conversation. I asked him what is the volume of business he is doing in the Tuticorin market? He gave me a number. I then asked him, "If I lift that entire volume from you, will you be able to give me a discounted price, and stay away from my market?" I was surprised that he readily agreed to my proposal. He felt that it was a good idea, as it could save him a lot of time, hard work and the troublesome work of collecting payments. We made a deal. Using a collaborative strategy, I was able to remove a competitor from my business.

The second one was somewhere in 2005. A tender was floated by BSNL, Tirunelveli to give soft skills training to over 2000 employees, over 6 months. It was published in the Newspaper and one of my friends forwarded it to me and said, "Why don't you participate in this tender through PALMS?" I immediately replied, "It is a government tender and there might be a lot of

formalities involved. Moreover, it is a huge project and with the amount of resources I have at my disposal, I don't think I will be able to handle it." He agreed to my argument, but still insisted – "There is nothing wrong in giving it a try. If you get it, it is good. If you don't get it, that is OK too."

This made me ponder a bit. Though I felt inadequate, I gathered my strength and talked to the trainers in my circle. A few of them were excited about the opportunity and gave me their consent to commit themselves to the training assignment, without any pre-conditions of their remuneration. They said, "Whatever money we get, we will share it fairly." With this assurance I got from the trainers, I hopefully started working on the tender. I did not have any idea about how to make a competitive bid, but I just worked out a reasonable rate, with a fair profit margin, and submitted my quote.

To my surprise that tender came through. Let me share how it happened. There were 3 bidders for the tender, and all of us had quoted different prices. In a general scenario, the company with the lowest quote will win the tender. But the approach of the General Manager, who served BSNL Tirunelveli, at that point of time, was radically different. He invited all the 3 bidders for a discussion. Based on the range of quotes we have submitted, he negotiated with us and arrived at a uniform price. He then split the total assignment volume into 3 and each one of us were assigned a particular number of participants to train. The work got easier and well executed. It was a win-win situation, for everyone. At the end of the whole process, I was amazed at how the whole thing had turned out. It made me relate to the quote, "It is better to try and fail and not try at all."

Always remember this. When you ask someone for something, you will either get a "Yes" or a "No." If it is a YES, it is a win for you and if it is a NO, it is perfectly fine too. Because, without asking, it is already a NO and therefore it doesn't make a difference. You can at least have the satisfaction, I tried and failed rather than did not try at all.

In a world of cooperation and collaboration, everything is possible. So, always believe and try to work on a WIN- WIN situation for all. In the process, you will end up creating more friends, and no enemies.

Happy Reading

D. Senthil Kannan

LET'S TALK

The Summer Olympics 2024 at Paris, which started off spectacularly on 26th July ended with a beautiful closing ceremony on 11th Aug. The Indian contingent brought back home 6 medals, which is marginally lower than last time. We also missed a few bronze medals, in close quarters, like a slip between the cup and lip moment.

Still, we need to be appreciative of our team, who put up a tough fight and be proud of the ones, who bagged the medals..

A topic of debate, over the last few days has been, "Why a largely populated country like India, is not able to create world champions, as compared to so many small countries, who have won more medals."

Some commonly heard answers are:

- We are highly academic- focused and don't take active interest in sports.
- We don't have adequate sports infrastructure.
- Sportsmen in our country, don't get the deserved recognition and remuneration.
- There is a lot of untapped potential, which has not been harnessed.

Whatever the answer may be, it is clear we are falling short somewhere and we must strive hard to address the gaps and build a stronger team. While we are making rapid strides, in other areas, we shouldn't lag behind in sports.

Los Angeles, we will come back stronger in 2028! What do you say?

The Bridge

There is a very narrow bridge over a river. One day a goat that was crossing this bridge met another goat just in the middle. There was no room for either of them to pass.

Which of the following can you imagine as the most likely scenario?

- A.** One goat willingly turned back to let the other goat pass first.
- B.** The two goats charged against each other, and, after a few rounds of confrontation, the stronger goat forced the loser to yield.
- C.** One goat lay down on the bridge, and the other goat walked lightly over him.
- D.** The two goats charged against each other, and both fell off the bridge and into the deep river below.

E. One goat retraced its way and waited for the other goat to come over; then, instead of going over to the other side, it stayed to play and graze with its new friend.

Analysis

- A.** Courteous and flexible. You believe in rational solutions to life's challenges, and, to achieve that goal, you are willing to make concessions and compromises.
- B.** You are confrontational in your approach to life. You have a thirst for power and usually take an all or nothing approach to life. You could be merciless, even though you do not always turn out to be the victor.
- C.** You act in a way that benefits the common good. You are wise and avoid confrontation when it is not called for. While you may appear submissive to some people, in reality you have a high self esteem that enables you to be warm-hearted and generous to others.
- D.** You hold a rather pessimistic view of human nature and are cynical about the world in general. You are weary of all the struggles and scuffles around you and generally tend to believe that things are headed in the wrong direction. You value peace of mind above most things even though to attain it requires a struggle.
- E.** Quite the idealist! Optimistic and upbeat, you believe that everything is possible. Generous and broad-minded, you want to enjoy life as much as you can and want to make as many friends as you can. Even though this hopelessly positive view of the world sometimes lets you down, it also does you a whole lot good as people enjoy being around you.

12 WAKE-UP CALLS THAT EVERY LEADER NEEDS TO HEAR

- | | |
|--|--|
| 1. If your team's failing, look into the mirror. You're the problem. | 7. If your team's afraid to speak up, you've already failed as a leader. |
| 2. If you can't handle criticism, you are not fit to lead. | 8. If you're not accountable, you're not credible. Own your mistakes. |
| 3. Your title makes you a Manager, your people make you a leader. Don't confuse the two. | 9. Don't just set the pace; set the standard. Excellence is contagious. |
| 4. Don't preach teamwork and then play favourites. Hypocrisy kills culture. | 10. Your team doesn't work for you. You work for them. Serve to lead. |
| 5. Stop micromanaging. If you don't trust your team, why should they trust you? | 11. If your actions don't inspire, your words won't. Lead by example. |
| 6. If you're not developing your team, you're diminishing them. Step up or step aside. | 12. A leader takes the blame and shares the fame. No exceptions. |

Let's together Build a Great Nation

by
Dr. G. Sugumar

77 Years ago, India won its freedom from the British rule after 200 years of slavery on the 15th of August 1947. While remembering the sacrifices, acts of bravery and relentless efforts of our great leaders and countless freedom fighters, let us pledge to uphold the values of our constitution, preserve our unity in diversity and contribute towards the development of our Nation.

In my humble opinion, the basic requirement is that every Indian should think "Nation first", feel proud to be the citizen of this great country which is rich in values, culture, traditions and the glorious knowledge that the ancient Indians possessed and practised, for which the whole world looked at us up to.

Many of us feel that our Mother India has not achieved what it should have, in these 77 years of independence. True, we haven't done enough. Some of us even feel that being modern is to follow the western ideologies and being progressive is to land in the west. This is basically because of the colonial hangover, even after 77 years of the independence from the British Raj. Basically, we are not interested in everything Indian.

We forgot what ancient Indians have shown the world. We were ahead in Science, Medicine, Astronomy, Economy, Trade, Philosophy, Life skills and Art. We taught the whole world through Taxila and Nalanda. Our indifference to Indian richness is the cause for several of our miseries today. Our education does not teach us the Great Indian Emperors in Raja Raja Chola, Rajendra Chola, and Ashoka but glorify Alexander and Akbar, the invaders.

Our country has exhibited exemplary tolerance, religious and cultural values, richness and practices. To tell you a few, we attribute Nicolas Copernicus to the Heliocentric theory, but over 1000 years earlier Baskaracharya had precisely calculated the orbital distance of Earth around the Sun and the distance between them. Aryabhata proposed that the Earth rotates on its axis.

Sushruth's description of Surgery and Ayurveda dates back to the 10th century BC and are relevant in modern medicine. His procedure and instruments are followed in plastic surgery with limited modifications even today. It is amazing to know that he had performed cataract surgery. The Mathematician Aryabhata of the 5th century is credited with Zero and Trigonometry providing sine table and calculation of the value of pi. Scholar Pingala of the 2nd century developed the Binary system which is fundamental to modern computing.

Fibonacci numbers in Nature was described by Gopalacharya and Chandra at least 800 years before the Italian. Yoga was a gift to humanity from India. Tamil and Sanskrit were the oldest languages with comprehensive Grammar and rich Literature. The ancient Indian contribution to the field of Art and Architecture, Metallurgy, Textiles... and the list goes on... is simply astonishing.

Many of us grumble that we have not advanced enough. Yes, but look at from where we started...and where are we.

India, during independence, was drained, depleted and divided, but determined to make it. The British looted about 45 Trillion USD worth material from India in term of resources, raw materials, diamonds including the Kohinoor, Gold, Cotton, Silk, Jute among others and left India with famine poverty and riots due to partition. 45 Trillion USD equals to 3555 Lakh Crore Rupees today which was over 1000 times our GDP then. India's share of the world economy was about 23% in 1700 AD, before the invasion of the British (according to historian Augus Madison) But, in 1947 the per capital income was just Rs 230/- which is equal to 2.89USD. Poverty, Hunger, Riots were daily occurrences. We revived through Green revolution of the 1960s, White revolution of the 1970s and the Blue revolution since 1990 to becoming a self-sufficient and later food-surplus country, exporting goods over 53 billion US dollars in 2022. In 2018, we became the 2nd largest food producer in the world, only next to China. Our per capita income is well over 2.3 lakh now. Today, our GDP is 3.9 Trillion USD, making us the 5th largest economy.

Public Health: Our life expectancy was just 32 years at the time of Independence. 23% of the 33-crore population had Malaria. Polio was rampant until 1990. Everyday 500 children got affected. Today we set example to the world. We eradicated smallpox in 1977 and later polio in 2013. India is a favourite destination for medical tourism. Almost 2 million visas were issued last year to people from about 100 countries. We have attained the status of being the World's pharmacy, with so much of R&D and production in that sector. Our life expectancy today is close to 70 years.

Science & Technology: In 1962, our space programme made a humble beginning. Today we are one of the Giants. In 1963, we started the Tumba Rocket Mission. In 2023 we proudly witnessed the successful landing of the rover in the south pole of moon through Chandrayan Mission. Digital Technology has seen a revolution with over 7 million Internet users. India is preparing for the roll out of 5G Technology. In 1974, May 18, Pokhran bomb, the “Laughing Buddha” exhibited our Nuclear capability despite restrictions from the US. Many would think it is unnecessary, but you can preach peace only if you are strong. We marched ahead in literacy, from a mere 12% pre-independence to over 78% through SSA. There has been a significant increase in the number of colleges and universities too, from the time of independence to now. 28 medical schools is now over 620, 4 Dental Colleges, now had become 323, from a meagre 33 Engineering colleges to over 6000 colleges today. India became the biggest talent pool. Youth population is the highest in India. 63% of the population is between 15 and 59 year of age. Remarkable is it not?

What made all these possible? It is our faith in values and democracy and efforts to improve literacy. Every Indian voted right from the 1st election. In the US, only after 150 years of their independence, everyone was allowed to vote. Even in Europe, women were allowed to vote much later. India is the birthplace of several religions including, Hinduism, Buddhism, Jainism, Sikhism, which taught us not just tolerance, but acceptance of all faiths.

Let us be proud to be Indian and instil this pride in young minds, to work together achieving further.

We have a population of 140 crores. We have problems - Corruption, Disorderliness, Violence, but in spite of all of these, our country has always showed resilience. Our responsibility is to be more responsible and contribute our best.

You are called Generation Alpha. You are the future of this country. The responsibility is on your shoulders. How do we contribute towards furthering India's cause? Be a responsible citizen and use our resources sustainably and responsibly. Take part actively in all relevant issues. Our duties are our priorities. Your duty as a student is to learn.... with relevance. The same has been advocated in Thirukkural,

எவ்வதுறைவதுலகு உலகத்தோடு
அவ்வதுறைவது அறிவு

உலகம் எதை நோக்கி செல்கிறதோ அதனை அறிந்து அதற்கு தகுந்தாற் போல நம்மை தயார் செய்து கொள்வதே சிறந்த அறிவு.

There is no point in grumbling, about what is limiting and not available. Plan to equip yourself with what is available. The world is full of opportunities, for those who are willing to work that extra.... You want to remain ordinary or do you want to work that extra, to become extraordinary? The choice is yours.

Our great nation expects quite a lot from you dear young minds. You are the future. You can shape not only your future but our country's future too. Our Government have set the target to take India to be a global leader by 2047, i.e 100 years of independence. You will have to be a part of the process, progress and realization.

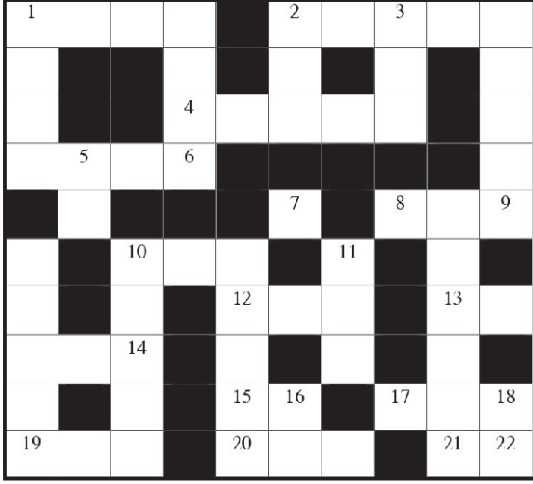

On this day you commit, reinforce and reaffirm the faith in you, for you can only bring that drive for any change. Strive to be the best in whatever you do. Your development will bring development to your family, your society and the combined developments of all will take the country to where it has to. As Mahatma Gandhi and Gautama Buddha said, “The future depends on what we do at present” Let us all do our best.

Jai Hind!

வாழ்க பாரதம் ! வளர்க பாரதம் !

The 8 positive self-talk commandments

1. Be an optimist, not a pessimist
2. Remain realistic and objective
3. Focus on the present, not the past or future
4. Appraise problems as challenges rather than threats
5. View successes as replicable and failures as surmountable
6. Focus on process, not product
7. Concentrate on things you can control
8. Separate your performance from your self-worth

இடமிருந்துவலம்

1. அதிகமாக நகைசெய்ய உபயோகிக்கும் உலோகம்.
2. நவமணியுள் ஒன்று பசுவில் ஆரம்பிக்கும்.
4. அமாவாசையில் இருந்துபெண்ணமிவரை.
7. சாமான்கள் எடுத்துசெல்லஉதவும் அடைப்பம்.
8. மாதா
10. கோகினூர் என்றால் உங்கள் நினைவிற்கு வருவது.
12. சுவீகாரம் கலைந்து உள்ளது.

Answer : 10th Page

RULES OF SUCCESS

Rule 07 - Just do it

"If you spend too much time thinking about a thing, you'll never get it done." - **Bruce Lee**

Don't over analyze and over think. Take massive action even if things aren't perfect before you start. Most people that try to get things perfect never get started at all.

Let me introduce you a new way of thinking:

1st let me share with you about archery. How do we start archery?

1. We get a bow READY, place the arrow,
2. We AIM carefully at the target,
3. We FIRE the arrow.

Now, it seems like common sense to all of us. You must be thinking who doesn't know this stuff?

Wait, let me ask you. How many times when you want to do something but you're afraid that it doesn't work out according to plan, you think and think and think again and yet you never take any action at all. Sound familiar?

We all want to get the perfect shot; we keep aiming but never fire because we over analyze. You have to FIRE first, only then you'll be able to learn from your first shot.

It's ok you don't get the perfect shot for the first try. And by right archery took many years of training to get perfect shot. You're not supposed to hit it right at the 1st shot. This concept was introduced by Michael Masterson in his book 'Ready, Fire, Aim'.

I used to be a perfectionist, but I realized that by taking action, I could get much more done and make much more progress.

You can make all the excuses in the world, but nothing happens until you stop blaming your circumstances or people in your life, and take control of your life. It is up to you to take responsibility for your life and create your own opportunities. You may not be able to do exactly what you want right now, but you have the opportunity to take steps toward it.

No one will create the dream life for you. You have to do it yourself.

BUSINESS INSPIRATION

Mr. Suresh Kumar

Founder & CEO, Pepul Tech (P) Ltd

In the realm of tech innovation, Suresh Kumar emerges as a unique blend of intellectual acumen and profound empathy. His journey is a testament to the synergistic power of emotional intelligence and visionary leadership in achieving success.

Suresh's social aptitude was apparent from a young age, and this was evident from the playground to the college clubs where he was more than just a participant. He became a beacon of change, motivating others to overcome their fears and insecurities. During his college years, he noticed that many of his Tamil medium peers were daunted by the prospect of public speaking and stage performances. Recognizing this, Suresh took on the responsibility to help them break their inferiority complex, which led to his election as the college secretary during his final year at Mookambigai College of Engineering in 2003. After graduating with a Bachelor of Engineering in Electrical and Electronics, Suresh's foray into the professional world was characterized by rapid and significant achievements. His unique ability and expertise quickly earned him a prestigious position in a top company. Under the mentorship of Mr. Balaji Kalyana Raman, Suresh's career flourished, and within six years, he was earning a substantial salary of 2 lakhs per annum, a testament to his dedication and skill set.

Suresh's belief in the power of innovation was the driving force behind his next venture. Along with his childhood friend George, he co-founded MacAppStudio, a company built on the foundations of problem-solving and creativity. Their initial breakthrough came when they developed an

application and sold it to an Australian company, a success that significantly boosted their confidence. This partnership and their exceptional coding skills led them to participate in an Intel competition, where they emerged victorious, earning the title of "World's Best Developer" and a \$15,000 prize. This prestigious recognition marked them as the youngest recipients of the Intel Blackbelt in Asia, and they were celebrated at a private dinner in San Francisco. Their journey, however, was not without its challenges. As a bootstrap startup, Suresh and George faced numerous hurdles, but their unwavering passion and perseverance transformed MacAppStudio into a thriving million-dollar enterprise. Starting with a laptop purchased on EMI, they gradually built their dream office and grew their team to 150 employees.

Suresh's leadership philosophy was rooted in the belief that a company should function as a family, fostering an environment where talent is nurtured, and every individual is valued. MacAppStudio's unconventional hiring practices, such as recruiting without resumes, highlighted their commitment to discovering and developing human potential. Suresh and George's approach was to align roles with individuals' innate abilities, creating a workplace where personal growth was as important as professional achievements. This nurturing environment resulted in a high employee retention rate, with only a few leaving, for highly valid reasons.

Their next ambitious project was Pepul, a privacy-first social network platform designed to offer a safe space for real identities and talents. Suresh's vision was to create an Indian-born global social platform, challenging the dominance of Silicon Valley. Pepul aimed to differentiate itself by providing a unique monetization model without compromising user privacy, a bold move that underscored Suresh's commitment to innovation and user welfare. His dream was to build a platform that not only spotlighted talents but also ensured the safety and privacy of its users.

Suresh Kumar's journey transcends the traditional metrics of business achievements; it's about building a community, valuing people, and nurturing potential. With the unwavering support of his family and friends, coupled with his innate ability to lead with both heart and mind, Suresh continues to inspire a new generation of leaders who aspire to rise by lifting others.

HEALTH WATCH

Coronary Artery Disease

Is narrowing of the blood vessels that supply blood and nutrients to the heart muscle. This is usually due to the buildup of cholesterol and other materials over many decades. This initially causes chest pain on unaccustomed exertion and may progress to heart attack at later stages. The good news for us is that many prevention and treatment methods are currently available.

People who have travelled between Tuticorin and Tirunelveli could not have missed the Vallanadu bridge which is a bottleneck. The 4-lane traffic becomes two lanes and still the vehicles keep moving albeit slowly. You don't talk about it when you come home. This is what happens when the coronary arteries start narrowing due to disease. This is technically called stable coronary artery disease. You get pain only when you go overboard on exertion. But imagine there's suddenly a concrete wall across the bridge. You'll notice the sudden stopping and big pileup of vehicles. This is akin to a heart attack in the blood vessels. Thrombus or blood clot forms over the already narrowed coronaries due to the breakage of plaque (cholesterol obstruction) called acute coronary syndrome. Heart attack is the most severe form of this condition causing collapse of the patient. Let's cover the common questions that pop up in people's minds and understand this important disease.

How common is this CAD? According to the Global Burden of Disease study age-standardized estimates (2010), nearly a quarter (24.8%) of all deaths in India are

attributable to coronary artery disease. This number is particularly creeping up in urban poor with disease affecting more than 10 percent of city dwellers. That's an astounding one in ten.

Why does this happen? Bad genes? Well maybe but not all that bad news. Many causes are preventable, and smoking is no.1. Tobacco usage in India is a major problem with over 35% smoking or using some or other forms of Tobacco. Beedi is still cheap, citing the small-scale industry it supports, and its use is rampant among the labor class. Coming to diet, though India is the vegetarian capital of the world, Indians consume less fruits and vegetables. Even in the affluent state of Tamil Nādu people eating the recommended five servings are only a 1% according to National family health survey. And the vegetables that are consumed too are charred beyond identification, leading to loss of essential micronutrients. We also consume more calories now (1500 to 2000Kcal/day) than before and the increase in fat consumption by the use of partially hydrogenated oils (high trans-fat.) is not helping the situation. How about physical activity? The ICMR-INDIAB study assessed physical activity using the Global Physical Activity Questionnaire. One of every 2 individuals was considered physically inactive. In addition, <10% of the studied population engaged in recreational physical activity. The other risk factors like Hypertension (30%) and Diabetes (12%) have been sowing more CAD seeds in the population. There is some good news in all this, truly. Non-communicable diseases like coronary artery disease are totally preventable. Tobacco use prevention, Cholesterol reduction and Hypertension control with diet and lifestyle modifications are achievable targets. A mass movement by health education just like the way we controlled our population growth should happen. It will change the way people perceive this important health problem.

What to do if it really happens? Doctors usually start with a physical examination. It comprises measuring your blood pressure, listening to your heart by stethoscope and also listening to your symptoms. She also assesses your activities of daily life. The importance of this may be dwarfed by the number of tests (in Table below) he or she orders. But getting the patient properly examined by the family doctor is a good starting point in doctor-patient relationship and should not be ignored.

- Blood tests.
- Cardiac catheterization.
- Computed tomography (CT) coronary angiogram.
- Heart MRI (magnetic resonance imaging).
- Coronary calcium scan.
- Echocardiogram (echo).
- Electrocardiogram (EKG/ECG).
- Exercise stress test.
- Chest X-ray.

“The Heart team” usually decides on the best available and suitable treatment option for a particular patient.

Percutaneous coronary intervention (PCI): This minimally invasive procedure has another name - coronary angioplasty. Your provider reopens your blocked artery to help blood flow through it better. They may also insert a stent to help your artery stay open.

Coronary artery bypass grafting (CABG): This surgery creates a new path for your blood to flow around blockages. This “detour” restores blood flow to your heart. CABG helps people who have severe blockages in several coronary arteries.

Optimal medical management: This is reserved for both extremes. Minor disease and diffuse disease.

Percutaneous coronary intervention (PCI): uses stents or metal tubes that dilate the narrowed coronary arteries. This is the treatment of choice in primarily clearing clots during heart attack which is called Primary Angioplasty. This is a quick and effective method. In half an hour a life-threatening disease is converted to a much stable condition. Re-blocking or re-occlusion is the Achilles's heel of this method. Technology is advancing and is trying to overcome this problem by coating the metals with anti-cancer drugs to prevent re-occlusion using DES or Drug Eluting Stents.

Bypass surgery or CABGs: In this time-tested treatment, we cut open the breastbone (sternum) and attach bypasses to the blocked coronary arteries. Sternal arteries and leg veins are used to create this channel. This novel surgery was performed first by Rene Favaloro at the Cleveland clinic in the USA in 1967. Surprisingly not much change has been made to this original procedure till now as it prevents further heart attacks and restores blood supply efficiently. It's like building multiple flyovers to combat the traffic problem. There is also a good relief from crippling angina or chest

pain for the patient thankfully. But he still needs to change his diet and lifestyle to save the bypass grafts from the original sin, the blockage disease. The recent trend is to use more chest arteries than leg veins. Also, with smaller cuts on the chest called Minimally invasive bypass graft surgery. The recovery after bypass surgery is slow, takes almost a month but the benefits are long lasting. It's like investing in a bike with good mileage. Do you remember the Hero Honda ad 'fill it shut it forget it'?

Medicines or Optimal Medical Treatment: These either prevent blood clots or stabilize the cholesterol levels not only in the heart but also in the whole body. It prevents both heart attacks and strokes from happening. It's a wonder drug everyone should consider for prevention. Please consult your primary doctor about its use.

Like we discussed the best treatment for a particular patient is debatable and the heart team comprising a heart surgeon, cardiologist, cardiac anesthesiologist and a medical doctor, often the primary treating doctor sit together in a cath-meeting to discuss which is the best. The job of the patient seems to be limited to just googling the best centers available locally with all the specialists in place. Good luck on your journey in preventing this disease and spreading the important message.

Role Prompting Technique

'Role prompting technique' provides a specific role for ChatGPT to take on, guiding its output. It is useful for tailoring text to a specific context or audience.

Tips for assigning roles to ChatGPT

- Be explicit about the role you want ChatGPT to assume in your prompt
- Ensure the role is relevant to your question or request
- Consider the level of expertise or perspective needed for your desired response

'Act as' vs 'You are'

When assigning a role to ChatGPT, both 'Act as...' and 'You are...' can work effectively, but they may yield slightly different results. It's essential to consider the context and the desired outcome when choosing the best approach.

'Act as...': This phrasing suggests that ChatGPT should pretend to be the specified role or character. It can yield more playful or creative responses, as the model might lean towards the idea of 'acting' rather than genuinely being the character or expert.

E.g.: Act as a historian and explain the causes of the French Revolution.

'You are...': This phrasing is more direct and instructs ChatGPT to take on the specified role or character more seriously. It can result in more focused and accurate responses, as the model assumes the identity of the specified role or expert.

E.g.: You are a historian. Explain the causes of the French Revolution.

To find the best approach for your specific needs, it's a good idea to experiment with both phrasings and analyse the results. Each may work better in different contexts or for different types of questions, so trying both can help you determine which one is most effective for your particular use case.

Few roles that ChatGPT can play

Advisor, Artist, Babysitter, Blogger, Business Expert,

Career Counsellor, Chef, Coach, Coder, Critic, Designer, Finance Advisor, Gamer, Generator, Guide, Health and Fitness freak, Language expert, Marketer, Music, Philosophy, Psychologist, Real Estate Agent, Religious Person, Reviewer, Specialist, Speech expert, Story teller, Teacher, Techy, Tool, Translator, Writer and the list goes on and on. Name the role and ChatGPT assumes that role and delivers the outputs. Even, caveman produced relevant outputs.

What is the RTF Framework?

RTF, short for Role Task Format, is a framework that helps you structure your prompts for ChatGPT. It defines three critical elements: the Role, the Task, and the Format, each playing a crucial role in shaping how ChatGPT responds to your queries.

Example 1

Headline: Crafting attention-grabbing headlines for articles, ads, or content.

- Role: Headline Writer
- Task: Craft an attention-grabbing headline
- Format: Catchy headline formatted in markdown

Example Prompt:

You are a skilled headline writer. Your task is to craft an attention-grabbing headline for a breaking news article about technological advancements in Dentistry. Write a catchy headline formatted in Markdown.

ChatGPT:

Say Cheese! Cutting-Edge Dental Tech Redefines Your Smile Game

Example 2

Video Script: Writing scripts for videos, ensuring clear and engaging content delivery

- Role: Professional Scriptwriter
- Task: Write an educational script about space exploration
- Format: Script for a 5min YouTube Script

Example Prompt:

You are a professional scriptwriter. Your task is to

create a script for an educational video about space exploration. The format you should use is a video script for a 5-minute YouTube video.

Chat GPT: (only a part of the answer is pasted here)

[Opening shot: A view of the Earth from space, with the sun rising behind it. Dramatic music plays in the background.]

Narrator: "Welcome to our educational journey through the cosmos. Today, we embark on a thrilling exploration of space, where humanity's quest for knowledge knows no bounds."

[Cut to footage of rockets launching into space, intercut with images of astronauts floating in zero gravity.]

Narrator: "Space exploration has captivated the imagination of mankind for centuries. From the first steps on the moon to the ongoing missions to Mars and beyond, we continue to push the boundaries of what is possible."

Points to remember

ChatGPT loves to follow instructions — you can use this to your advantage by asking it to limit message length or roleplay a specific persona or by using the RTF framework.

Have fun with the generative AI and follow this space for more updates!

*It is not because things are difficult that we don't dare;
it is because we don't dare that they are difficult - Seneca*

In life, we take a lot of decisions which ultimately decide the quality of our life. One important decision is judging how far we should stretch our efforts. We have a choice to decide our own standards and benchmarks. Many times, we decide that a thing is 'difficult' based on certain data and information. If our decision is based on specific data, then it is a fact-based decision. However, if our decision is based on our 'opinion,' we need to challenge whether our opinion is a reality or a perception.

I have been repeatedly writing about the link between our mind and brain. Our brain is controlled by our mind. If the mind is bold and courageous, our brain looks for such information that will support our action plan. On the other hand, if our mind is filled with fear or threat, our brain will direct our attention to seeking such facts that will discourage us from acting.

But our mind is a sincere servant and wants to protect us. Like any other servant, the mind also needs to be mentored and trained. Any self-development is mind development. When we are born, our brain is fully formed, and we cannot 'develop' our brain. But our mind is blank when we are born and gradually evolves to maturity by careful training and mentoring.

One way to make our mind powerful is to feed it with such information which will empower us. In my time management seminars, I encourage participants to read success stories and autobiographies of great achievers. There are blind people who have achieved great things; there are physically handicapped people who have climbed Mount Everest. There are hundreds and thousands of rags to riches stories; there are people who ultimately succeeded when everyone thought they would fail. Einstein, Watson, Steven Spielberg, Paton, Walt Disney, Steve Jobs are all examples of those who dared.

So, which category do you belong to? Are you the person who feels a thing is difficult and so you don't dare, or you don't want to dare and rationalize your decision by saying that it is difficult!

CREATING NEW FLOOR SPACE

LOVE & RELATIONSHIPS

Empowering Families for Success

By Holly King

For couples with children, maintaining a happy marriage often means fostering a successful family dynamic and raising children positively. Initially, couples may not fully consider how children will affect their marriage. As children come into the picture, the focus often shifts from the couple's relationship to parenting, potentially straining the marriage.

One key to preventing this strain is for couples to regularly discuss their parenting approaches. They should address how they were raised, their experiences, and how these influence their parenting styles, including what traditions they wish to keep or change. Differing backgrounds and experiences can lead to challenges in aligning parenting methods, which can strain relationships.

It's crucial for couples to address their expectations about daily rituals, such as mealtimes and leisure activities, before having children. These expectations often stem from their own childhood experiences and can influence how they raise their children. Discussing these expectations helps avoid potential conflicts and strengthens both the marital and family relationships.

Role modelling is essential for creating a positive family environment. Adults should demonstrate what strong, positive relationships look like, both in their marriage and in their

interactions with their children. Many people lack positive relationship models from their own upbringing, so showing children what a loving, respectful relationship looks like provides them with a valuable example.

Respect is a significant aspect of these relationships. Children should see respect being modelled by adults, including how parents treat each other. Psychologist Carl Rogers' concept of "unconditional positive regard" highlights the importance of showing basic acceptance and support regardless of behaviour. This approach helps children learn how to treat others with respect and fosters a positive family dynamic. In a marriage, demonstrating unconditional positive regard for each other sets a standard for how children should interact with family members and others. This behaviour promotes a respectful environment, both within the family and in external relationships, contributing to the development of strong communities.

Another crucial aspect of a happy marriage and empowered children is **Self-care**. When children enter a relationship, the focus can shift away from the couple to parenting. However, maintaining a strong relationship with one's spouse and taking care of oneself are vital. Couples should schedule regular date nights and periodic getaways to reconnect and nurture their relationship. This not only strengthens their bond but also models the importance of a healthy relationship for their children.

Establishing daily rituals, like sharing "highs and lows" at mealtimes or celebrating achievements with special gestures, can strengthen family bonds. These rituals provide opportunities for family members to connect and support one another, fostering a positive atmosphere.

Addressing challenging behaviours in children is another aspect of effective parenting. Understanding that such behaviours are often mistakes rather than intentional misdeeds is crucial. Parents should ensure that children understand expectations and consequences clearly, provide acceptable choices, and avoid making empty threats. Consistency in responding to behaviours, both positive and negative, helps children feel secure and understand what is expected of them.

Strong families form the foundation of strong communities. By building positive relationships within the family, parents give their children the best chance for success and contribute to creating supportive, resilient communities.

McKinsey's Seven Degrees of Freedom for Growth

Exploring New Opportunities for Success

How can you identify new opportunities to increase revenue? If you tend to rely on the same avenues for growth, you're likely to miss out on others that might be more advantageous or less risky. In this article, we'll explore the Seven Degrees of Freedom for Growth – a tool you can use to identify opportunities for expansion that you may otherwise overlook.

About the Tool: Mehrdad Baghai, Stephen Coley and David White, partners at McKinsey and Company, developed the Seven Degrees of Freedom for Growth model and published it in their 2000 book, "The Alchemy of Growth: Practical Insights for Building the Enduring Enterprise."

They created the model to address the constraints that many leaders subconsciously apply when they think about how to grow their businesses. Each "degree" helps you open your mind and break out of habitual thinking patterns.

How to Apply the Seven Degrees

Let's look at each degree in turn and explore what you can do to make the most of new opportunities in each area. It's best to analyse the degrees sequentially, as they become more complex as you go down the list.

1. Selling Existing Products to Existing Customers:

Your first step is to think about how you can sell more of your existing products to your current customers. First, look at your marketing strategy. How can you encourage customers to increase the size or

frequency of their purchases, or buy other products from your range? Next, look at pricing. Have you priced your products or services competitively? How can you add extra value for your customers so that you can charge more for them? Or could you increase volume and maximize profit by dropping price? Also, use tools such as the Brand Pyramid to develop customers' loyalty, so that they are more likely to buy from you again.

2. Acquiring New Customers in Existing Markets:

The second degree of growth gets you to consider how you can attract new customers for your existing product range. You'll probably have plenty of ideas on how you can do this. However, if you don't do it already, look at using market segmentation to divide your market into niche groups. Can you develop marketing approaches that particularly appeal to people in these segments – or to new types of customers altogether? You can also use the Product Diffusion Curve to target different customer types, based on the stage a product is at in its life cycle.

3. Creating New Products and Services: With this degree, you look into developing new products and services, and enhancing existing ones. Review your current offering. How can you improve it to make it more appealing or more effective? To generate new ideas for products, use a combination of rational, structured thinking and brainstorming, as well as creativity tools like the Simplex process and TRIZ. You can also use PEST Analysis to spot trends or changes in customer perceptions, both of which can be opportunities for growth; while tools like Kano Model Analysis and Doblin's 10 Types of Innovation can give useful insights that drive product and service development.

4. Developing New Value-Delivery Approaches: This degree relates to how you handle products and services before, and as, they reach your customers. How can you improve the way that you create, offer and deliver your products to increase growth? First, look at your current business processes. Can you add value by exploring new approaches, improving quality, or working more efficiently? Use Value Chain Analysis and Porter's Value Chain to understand how you create value throughout your organization, so that you can look for areas where you can do things better. Key partnerships and alliances can be invaluable here,

especially if your organization struggles to meet demand on its own. Use the Outsourcing Decision Matrix to identify which tasks you can outsource and which you should keep in-house. You could also explore entirely new sales channels. This can include bringing on board new distributors or finding creative ways to get your products into your customers' hands.

5. Moving Into New Geographies: New markets can present exciting areas for growth. Before you start scanning the globe, however, look at the markets you already serve. Is there any way to deepen the distribution you have in these territories? Then, look at your organization's reach on a national level. If you only serve a limited area, how can you expand into new markets at home? Where are your greatest opportunities? As you think about global markets, use the CAGE Distance Framework to analyse which ones will be the best fit for your organization and which you should avoid. If you do expand into a new market abroad, use the EPRG Model and Porter's Diamond so that your organization can adapt to the country's culture effectively.

6. Creating a New Industry Structure: This degree encourages you to see how you can use alliances and acquisitions to grow your business. Are there any organizations, either in your industry or outside it, that you can partner with or even acquire to achieve shared objectives, or create greater economies of scale? Can you increase your bargaining power or have more influence on industry regulation with a strategic alliance or merger? Bear in mind that this can be a risky area for growth, as it's difficult to predict how mergers and acquisitions will play out – very many of them fail to achieve the value desired.

7. Opening up New Competitive Arenas: The last degree of growth involves searching out opportunities to diversify, so that you can expand into new markets and industries. Look at your assets using approaches like VRIO Analysis and Core Competence Analysis. Can you use any of these to create an entirely new business? Consider your organization's skills and resources, including people, technology and knowledge.

The biggest benefit of the model is that it gives you a wide range of opportunities that you can explore.

An ascetic returns Home...

A young ascetic sitting in meditation under a tree was splattered by the droppings of a bird. He looked up angrily at the culprit and such was the intensity of his wrath that the bird was reduced to ash.

His concentration disturbed, the ascetic got up and went in search of food. He knocked at the door of a house but there was no answer. He knocked again and the lady of the house shouted that she was coming.

Presently she came out with food and seeing that he was annoyed at having had to wait so long, smiled and said: "Please don't try to burn me with your angry glance like you did that bird. My dharma as a housewife is first to take care of the needs of my family before attending to the needs of others."

The ascetic realized that she was no ordinary woman and was ashamed of himself. He asked her to teach him what dharma was. She said he should see Dharma Vyadha.

The ascetic went in search of Dharma Vyadha expecting to find a venerable sage, but the man turned out to be a meat seller.

Dharma Vyadha made him wait while he served his customers. When the ascetic showed signs of impatience, the meat seller smiled and said:

"Just as the woman's first duty was to her family, my first duty is to my customers."

So the ascetic waited. When the last of his customers had gone, the meat seller turned to the ascetic and invited him home.

When they reached Dharma Vyadha's house the ascetic was again made to wait while his host lovingly attended to his parents. It was quite some time before the meat seller could return to his guest, but the young man showed no trace of anger. A transformation had come over him.

"Now I know what dharma is," he said, rising and bowing to the meat seller.

Giving up the path of asceticism he returned home and begged forgiveness of his parents for having deserted them in their old age.

"I seek your blessings," he said, "to give me strength to do my dharma."

SHORT STORY

Keeping the Flame Alive

A man, who regularly attended meetings with his friends, suddenly and without any notice stopped participating. After a few weeks, on a very cold night, the leader of that group decided to visit him. The leader found the man at home, alone, sitting in front of a fireplace where a bright and cozy fire burned. The man welcomed the leader in, and they sat together in a companionable silence, watching the dancing flames around the logs that crackled in the fireplace.

After a few minutes, the leader, still without saying a word, examined the embers that had formed. He selected one of them, glowing the brightest of all, and removed it to the side with a pair of tongs. Then, he sat down again.

The host watched attentively, fascinated by what was happening. Before long, the lone ember's flame began to diminish, until it was reduced to a momentary glow and finally, the fire went out. In a short time, what was once a bright light and heat had become nothing more than a black and dead piece of coal.

Few words had been spoken since the greeting. As the leader prepared to leave, he picked up the now useless coal with the tongs and placed it back in the middle of the fire. Immediately, the ember was rekindled, fuelled by the light and heat of the burning coals around it.

When the leader reached the door to leave, the host said, "Thank you for your visit and for your beautiful lesson. I'll return to the group soon."

The group becomes extinguished when each member who withdraws takes their fire and heat from the rest. It's worth reminding all group members that they are part of the flame.

This is a powerful reminder that we are all responsible for keeping each other's flame burning. We must promote unity among us so that the fire remains strong, effective, and lasting. It doesn't matter if we are sometimes bothered by the multitude of messages that reach the chat. What truly matters is staying connected. We are here to meet, learn, exchange ideas, or simply to know that we are not alone.

EPIPHANY

John D. Rockefeller was once the world's wealthiest individual and the first billionaire. By 25, he controlled one of the largest oil refineries in the United States, and by 31, he was the largest oil refiner globally. By 38, he managed 90% of the oil refined in the U.S.

By the age of 50, he was the richest man in the country. His entire life, from his decisions to his relationships, was focused on building his personal power and wealth.

However, at 53, Rockefeller's health deteriorated drastically. He suffered immense pain, lost all his hair, and could barely eat anything other than soup and crackers. Despite his wealth, he was miserable. His physicians predicted he wouldn't live another year.

Facing his mortality, Rockefeller had an epiphany. He realized that his vast wealth was meaningless if he couldn't take it with him. Recognizing this, he made a significant decision.

He called his attorneys, accountants, and managers, declaring his intention to devote his wealth to hospitals, research, and charitable causes. This led to the creation of the Rockefeller Foundation, which funded major medical discoveries, including Penicillin and cures for Malaria, Tuberculosis, and Diphtheria.

Remarkably, once Rockefeller began to give back, his health improved dramatically. Although expected to die at 53, he lived until the age of 98.

Rockefeller discovered the power of gratitude and philanthropy, giving away the majority of his wealth. This act not only healed him but also made him whole.

In his later years, he reflected in his diary:

"God taught me that everything belongs to Him, and I am merely a channel to fulfill His wishes. My life has been a long, happy journey; full of work and play. I let go of worry, and God was good to me every day."

John Davison Rockefeller

- Are you always in a hurry to do things?
- Are you impatient or become restless when work doesn't get completed on time?
- Do you value the quantity of tasks completed over the quality of tasks?

If Yes, then Ailyak is probably an antidote for this.

Ailyak is a Bulgarian word that means, the art of doing everything, slowly, with no rush, while enjoying the process and life in general.

The Ailyak concept comes from the city of Plovdiv, *which is* the cultural capital of Bulgaria. Its inhabitants are famous for their long leisure walks - back and forth, the major pedestrian street. So, it talks of people, who do things with a relaxed mindset, enjoying the things they are doing.

The way we do things, tells a lot about ourselves. The belief of not having enough time is more often a mind block than a reality. Time is a manmade construct for our convenience, but we have allowed time to cause undue pressure on us.

We feel stressed when things don't get completed on time. We feel impatient. We hate to wait. We feel rushed up trying to do more in less time and the result is often a compromise on quality of the things we do.

There is a phrase "Haste makes waste". It implies, when we try to do things quickly, mistakes occur, which in turn result in waste of time, effort, and materials. When we do things in a hurried fashion, the result often could be a shabby work which is prone to many mistakes. So, it makes good sense to do things in a relaxed and slow-paced manner, ensuring that we are doing quality work that we can be glad and proud about.

I would like to relate the concept of doing things with a sense of love and perfection, with the lifestyle of Steve Job - co-founder of Apple. Though he was a man of science, he thought like an artist. He not only wanted to make his products to be functional, but highly aesthetic too. So, he spent many hours of time, improvising the product without time consciousness, which made it difficult to deliver the product on time. But it was later realised that it was his obsession to quality and perfection, that made him to present to the world, a brand of products, which people across the globe, today frenzy over.

When we are doing something interesting, we get so engrossed that, we tend to lose a sense of time. It could be while working on a painting, writing an article, or having a good time with friends. And suddenly, we realise a lot of time has passed. Ailyak, gives us a sense of comfort, saying that there is no need to feel guilty about it.

There is a saying, "The journey is more beautiful than the destination". Ailyak is a reminder to take the time, to smell the roses on the path.

MUSINGS

OLYMPIC SPIRIT

The original values as expressed in the Olympic Charter were to 'encourage effort, preserve human dignity and develop harmony'. Over time, they have evolved and are now expressed in more contemporary terms: excellence, friendship and respect.

Excellence is about striving for greatness, pushing limits and achieving personal bests. Friendship is about building camaraderie, showing solidarity and celebrating shared experiences among athletes and nations. Respect is about embracing diversity, inclusivity and fair play, both on and off the field.

This is the idea of setting your rivalries aside. There is more that unites us than divides us. The goal of the Olympic Movement is to contribute to building a peaceful and better world by educating youth through sport practiced without discrimination of any kind and in the Olympic spirit.

The Olympic spirit inspires athletes to compete with integrity, respect their fellow competitors and unite the world through sport. It's a powerful symbol of global unity, peace and athletic achievement.

**Olympic Spirit is a leading light
To play it as sport, not as fight!**

Case Law: GST Orders should be passed in English too, Says HC.

This week, I would like to share an interesting case law that has caught the attention of legal experts and the public. The Andhra Pradesh High Court addressed a significant issue concerning the language of GST Orders under the Central Goods and Services Tax (CGST) Act, 2017. The case, *M/s Subodh Enterprises v. Union of India and Others*, revolved around whether an appellate order issued in the state could be legally valid if written solely in Hindi, a language not commonly used in Andhra Pradesh for official communications.

The petitioners, *M/s Subodh Enterprises* and others found themselves at a disadvantage when they received appellate orders from the Commissioner (Appeals) written entirely in Hindi. The petitioners, who are not conversant in Hindi, sought copies of the orders in English. However, their requests were denied, leading them to file writ petitions before the Andhra Pradesh High Court.

The core issue in this case was whether the appellate orders could be issued only in Hindi, especially in a region where English is the primary language for official communications. The petitioners argued that they were unable to

understand the orders and, therefore, could not take appropriate legal action. This, they claimed, was a violation of their rights.

The respondent [Commissioner (Appeals)], on the other hand, justified his actions by citing various constitutional provisions and government directives that promote the use of Hindi as the official language of the Union. He pointed to Article 343, which designates Hindi as the official language of India, and Article 344, which advocates for the progressive use of Hindi for official purposes. Furthermore, he mentioned that under the Presidential Order of 2008, 20% of the work in certain regions, including Andhra Pradesh, should be conducted in Hindi.

However, the court found that these arguments did not override the legal requirements for bilingual communication in central government offices. The court cited the Official Languages Act, 1963, and the Official Language Rules, 1976, which mandate that both Hindi and English should be used for official documents, especially when communicating with non-Hindi speaking states or regions. The rules clearly state that in regions like Andhra Pradesh, English must be used for communication, and documents should be provided in both languages.

The High Court ruled in favour of the petitioners, emphasizing that the orders issued in Hindi alone were not permissible under the law. The court directed the Commissioner (Appeals) to furnish English Version of the orders to the petitioners within three weeks.

The HC further held that the orders would not take effect until the English copies were served, and the petitioners' right to challenge the orders would begin only upon receipt of the English versions.

As far as this case is concerned, the dispute was not revolving around the interpretations about GST statute, instead the sole dispute was whether the GST Orders can be issued in Hindi alone, particularly in Non-Hindi speaking states.

JUST FOR LAUGHS

A man went to the doctor complaining of insomnia. The doctor gave him a thorough examination, found absolutely nothing physically wrong.

He told him, "Listen, if you ever expect to cure your insomnia, you just have to stop taking your troubles to bed with you."

"I know," said the man, "but I can't. My wife refuses to sleep alone."

John and Mary visit their pastor for marriage counselling.

The pastor gets up and hugs Mary and sits down. He gets up and hugs Mary a second, and third time, and then turns to John and says, "See that, John. Mary needs that EVERY DAY! "

John replies, "Well, that's fine, Pastor. But I can't bring her over here except on Tuesdays and Thursdays. "

We visited our newly married daughter, who was preparing her first Thanksgiving dinner. I noticed the turkey thawing in the kitchen sink with a dish drainer inverted over the bird. I asked why a drainer covered the turkey.

Our daughter turned to my wife and said, "Mom, you always did it that way."

"Yes," my wife replied, "but you don't have a cat!"

Joe: "That's a mighty fine stuffed lion, Moe."

Moe: "Thank you, Joe. This lion was caught by my uncle during one of his trips to Africa."

Joe: "Fascinating. What is it stuffed with?"

Moe: "My uncle."

A Sunday school teacher was teaching her class about the difference between right and wrong. "All right children let's take another example," she said. "If I were to get into a man's pocket and take his wallet with all his money, what would I be?"

Little Johnny raised his hand, and with a confident smile, he blurts out, "You'd be his wife or girlfriend!"

I used to think drinking was bad for me.

So I gave up thinking.

Diner: "These oysters are very small."

Waiter: "I suppose, sir."

Diner: "And they don't look very fresh."

Waiter: "Then I suppose it's a good thing they're so small, isn't it, sir?"

I bought a bag of air today...

The company that made it was kind enough to put some potato chips in it as well.

Mr. and Mrs. Morrison were on a safari in Africa.

As they were walking through the jungle, a huge lion comes creeping out towards them, ready to pounce.

"Shoot!" Mrs. Morrison screamed to her husband. "Shoot!"

"I can't!" he yelled back. "I'm all out of film!"

Did you know that the word 'nothing' is a palindrome?

Backwards it spells 'gnihton', which also means nothing.

An angry wife was complaining about her husband spending so much of his free time in the local bar, so one night he took her along with him. "What'll you have?" he asked.

"Oh, I don't know. The same as you I suppose," she replied. So, the husband ordered a couple of Jack Daniel's and threw his down in one shot.

His wife watched him, then took a sip from her glass and immediately spit it out. "Yuck, that's TERRIBLE!" she spluttered. "I don't know how you can drink this stuff!"

"Well, there you go," cried the husband. "And you think I'm out enjoying myself every night!"

My favourite animal is my dog, because every time I ask him, "How do I look?"...

He always answers me by saying, "Wow! Wow!"

EXPRESSIONS

Faith And Courage In Life

In life there are people that will hurt us
and cause us pain,
but we must learn to forgive and forget
and not hold grudges.

In life there are mistakes we will make,
but we must learn from our wrongs
and grow from them.

In life there are regrets we will have to live with,
but we must learn to leave the past behind
and realize it is something we can't change.

In life there are people we will lose forever
and can't have back,
but we must learn to let go and move on.

In life there are going to be obstacles that
will cause interference,
but we must learn to overcome these challenges
and grow stronger.

In life there are fears that will hold us back
from what we want,
but we must learn to fight them with the
courage from within.

God holds our lives in his hands.
He holds the key to our future.
Only he knows our fate.

He sees everything and knows everything.
Everything in life really does happen
for a reason: "God's Reason"
